
Institutional Intelligence

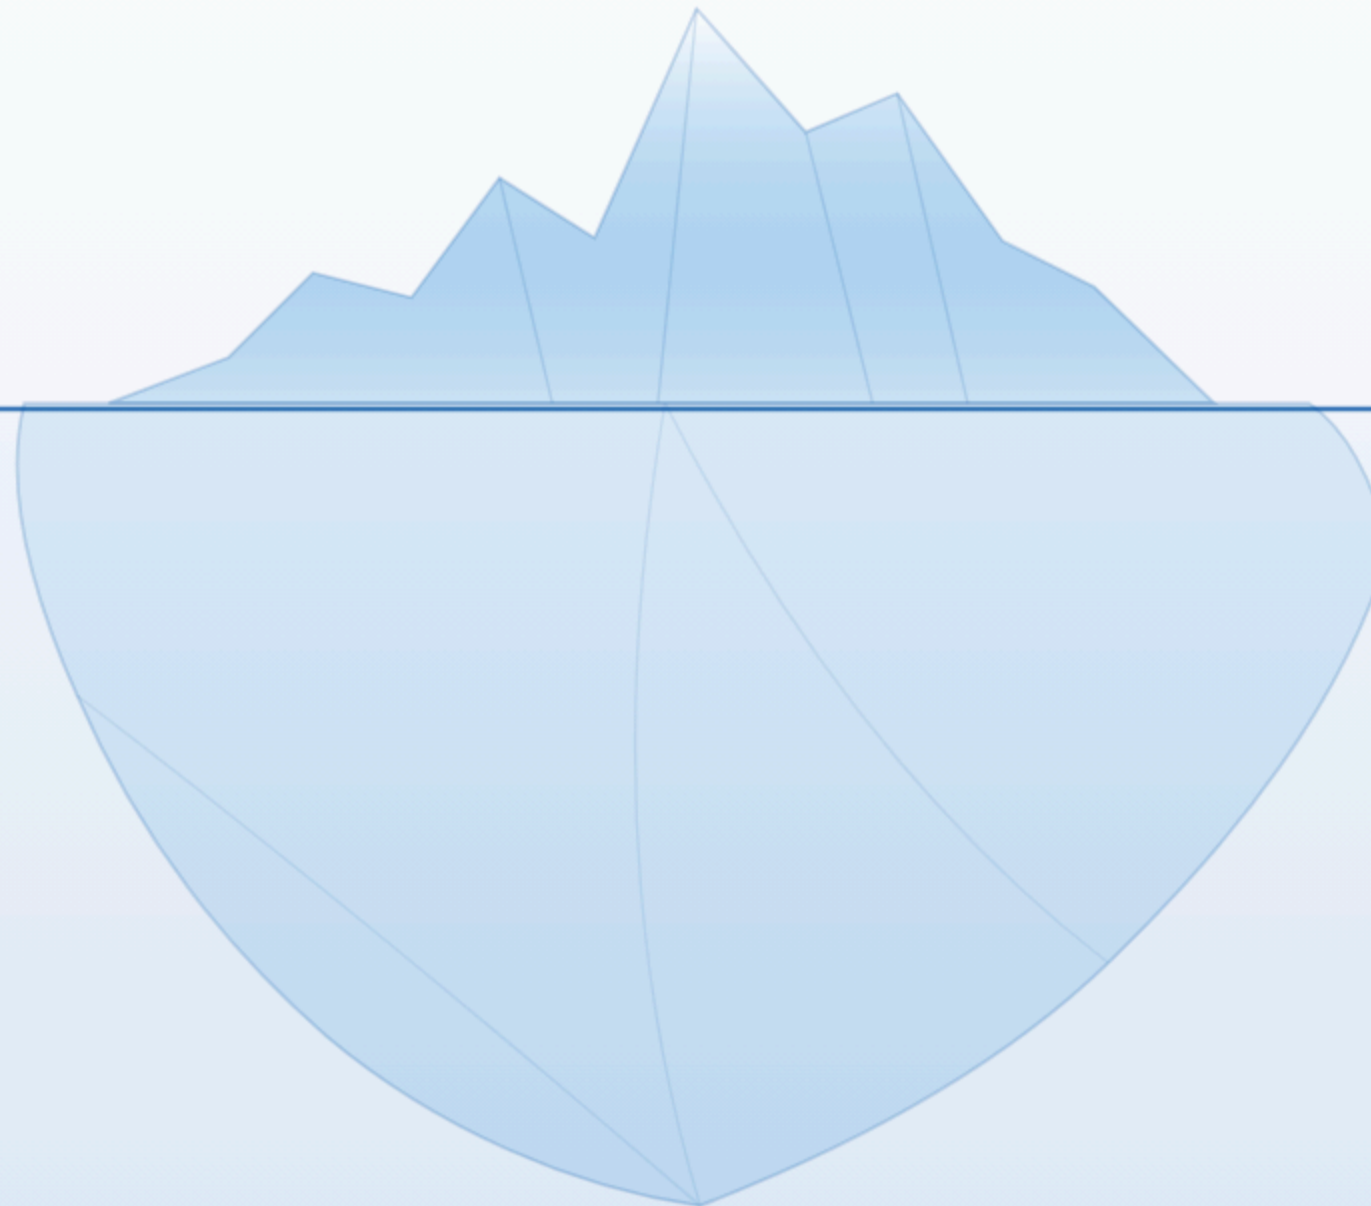

Turn proprietary knowledge into operating leverage

Your data is *your* alpha

But most of it isn't being put to work

ACCESSIBLE INFORMATION

PROPRIETARY KNOWLEDGE

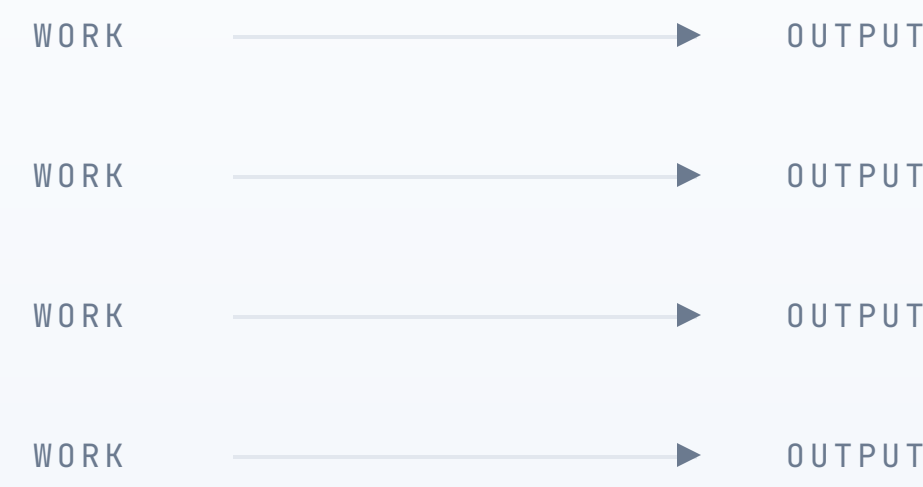

Models aren't the bottleneck

Your data infrastructure is

TODAY

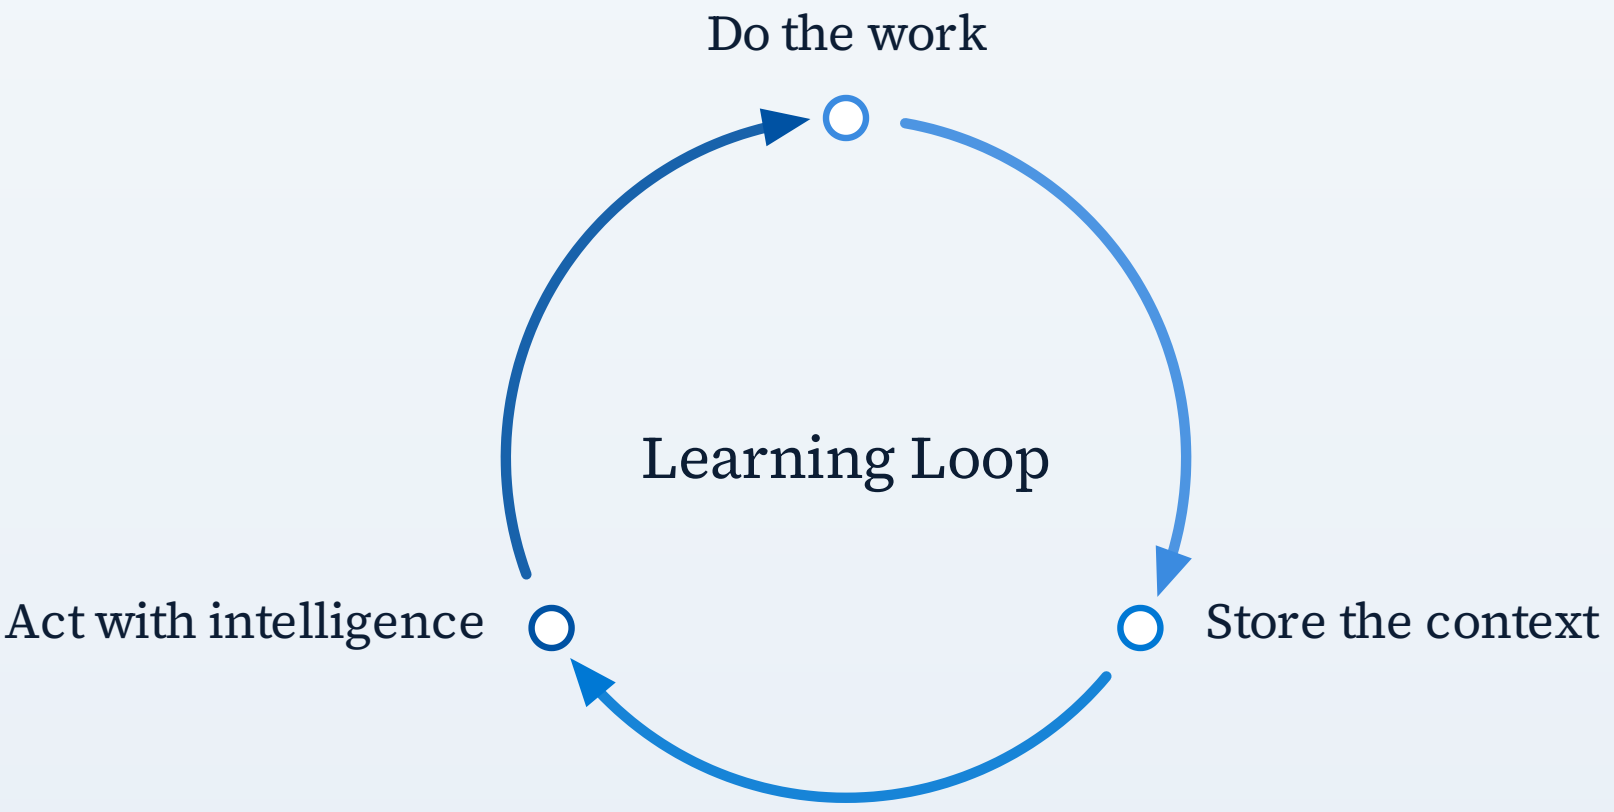

Every workflow starts from scratch

Context is lost between workflows

FUTURE

Every workflow carries context forward

Each decision becomes context for the next

Leading managers are leaning into AI

We are seeing the gap widen between managers who invest in AI and those who don't

STAGE	AI DEPLOYMENT	DATA INFRASTRUCTURE	IMPACT
Restricted	Blocked or limited to isolated pilots	Spreadsheets, files, and disconnected systems	Falling behind as workflows remain unchanged
Assistive	Claude supports individual tasks	Selected sources are connected; other context is supplied through copy and paste	Keeping pace as the same work becomes somewhat faster
Operationalized	Agents execute recurring workflows across systems	Warehouse or lakehouse foundation with governed context, permissions, and lineage	Pulling ahead as work moves off the team's desk

Better data creates leverage across every function

Shared data infrastructure and applied AI improve how every team operates

INVESTMENTS

Evaluate more opportunities

Compare each opportunity against firm precedent without rebuilding context.

PORTFOLIO MANAGEMENT

Accelerate value creation

Identify risks and opportunities earlier and scale what works across the portfolio.

INVESTOR RELATIONS

Communicate with confidence

Produce consistent, source-backed updates using current portfolio information.

FINANCE & OPERATIONS

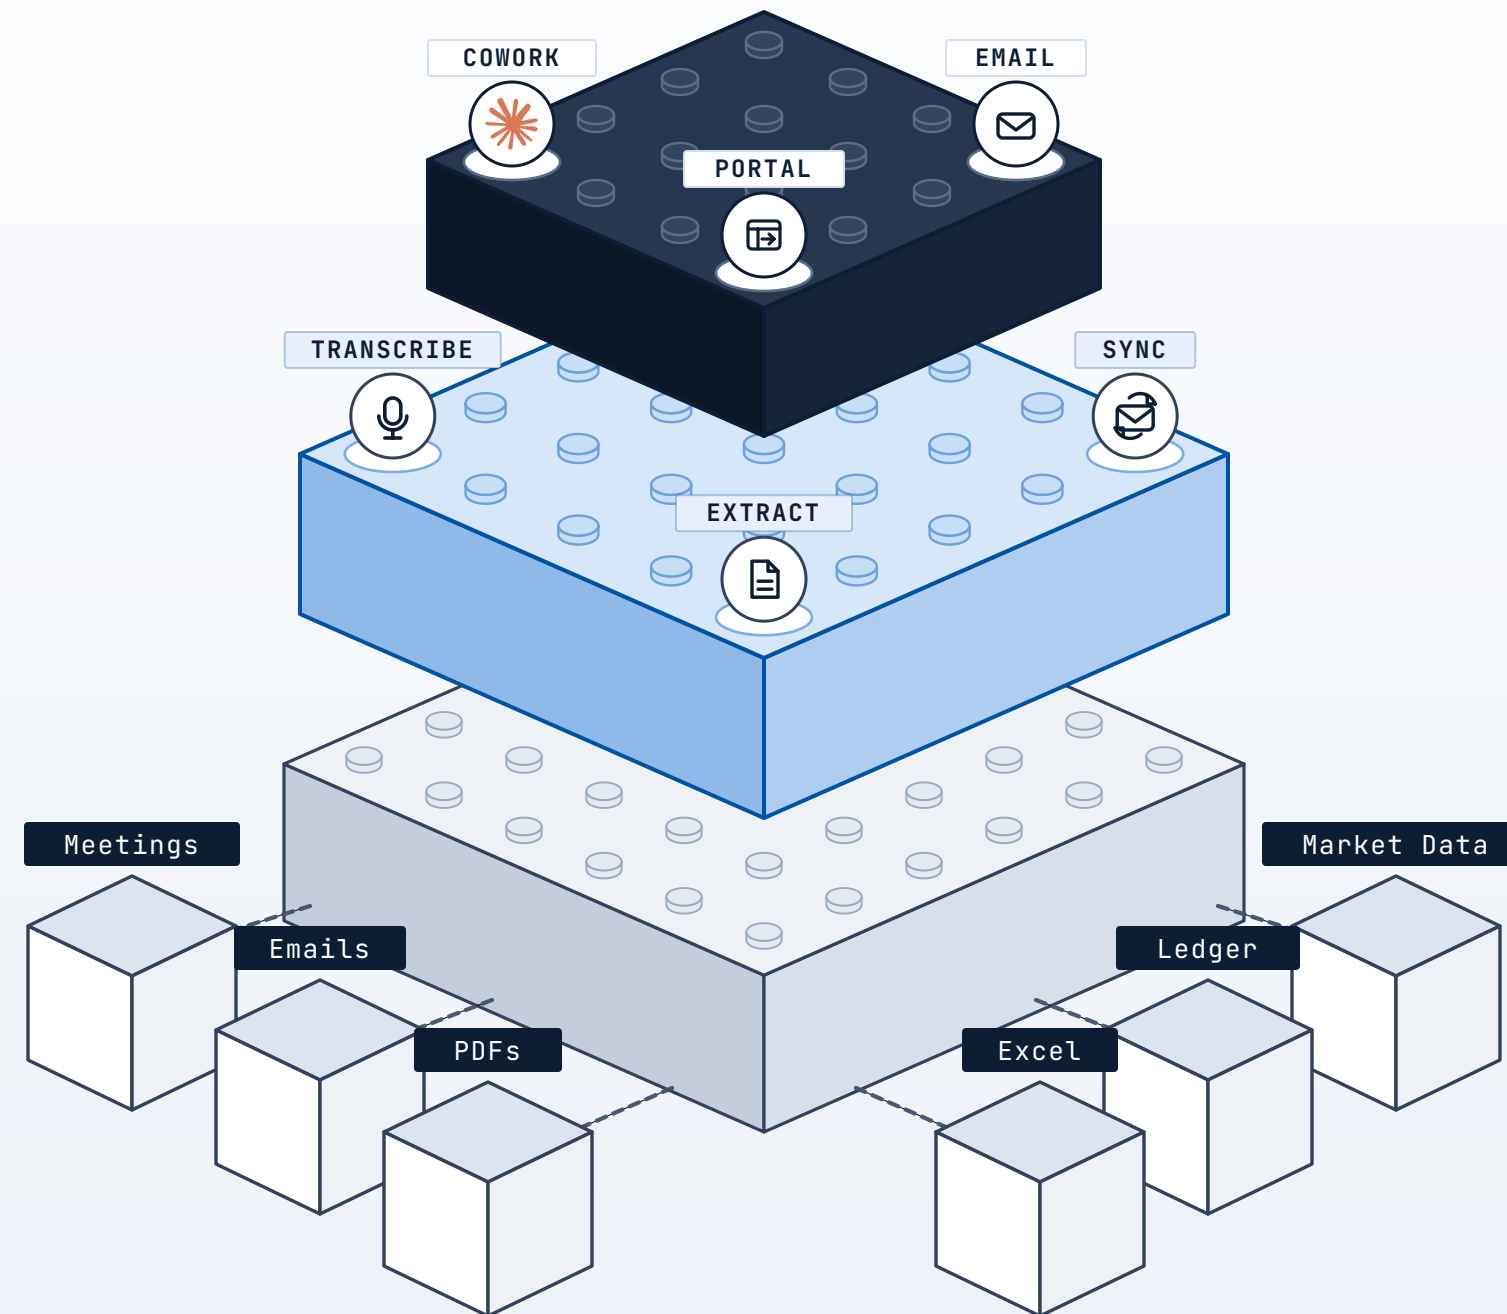

Spend less time reconciling

Keep information current across models, systems, and reporting workflows.

Shared data foundation + AI

How we help you build an AI advantage

We engineer infrastructure, processes, and controls tailored to how your firm operates

- **Applications**

Ready-to-deploy applications for your workflows

- **Agents**

Execute and coordinate work across systems

- **Ontology**

Structured knowledge with access control

We know the work

Our team brings experience across asset-management workflows and infrastructure

Erik Ronning

Co-founder & CEO

Previously a **Founding Engineer at Maybern**, where he led engineering and pioneered automations across fund-level waterfalls, management fees, and back-office workflows.

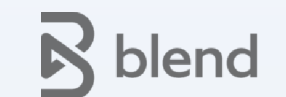

Grant Gustafson

Co-founder & CTO

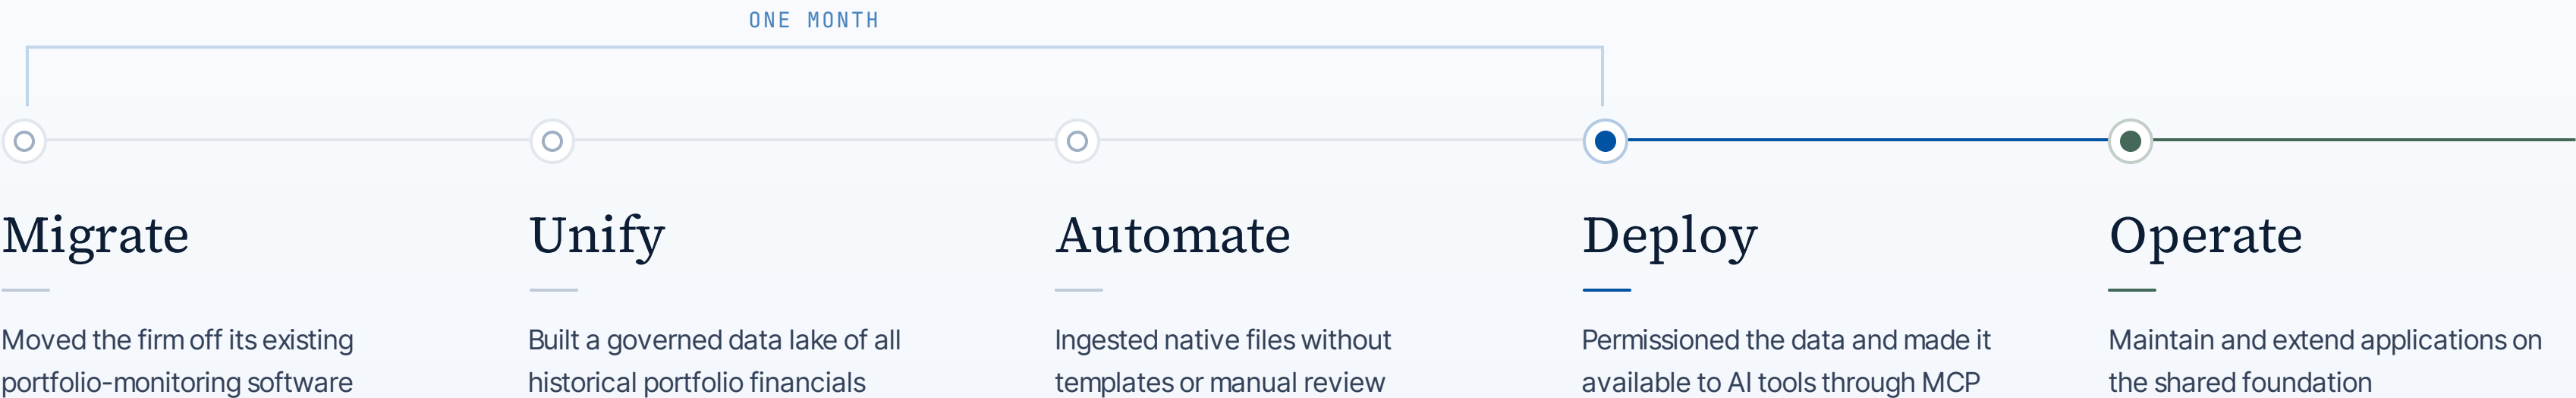

Former **Head of Quantamental Engineering at Marshall Wace**, where he built and owned data and AI infrastructure for institutional research and systematic investing at a \$70B investment manager.

BROADER TEAM EXPERIENCE

We provide a fast path to deployment

In one month, Rengo AI delivered more than the previous vendor did in over a year

Case study · Portfolio-monitoring implementation

Bringing institutional rigor for sensitive data

Governance and security are foundational across how we build, deploy and operate

No training on your data

Customer data is never used for model training or improvement.

Data isolation

Strong data isolation with enforced boundaries at the storage layer.

Encrypted everywhere

End-to-end encryption across storage and network layers.

Audited and tested

SOC 2 Type II compliant with ongoing independent testing.

Let's get started
